FIELDS OF INTEREST	Health Economics, Labor Economics, Public Economics	
CURRENT POSITION	Bowdoin College Visiting Assistant Professor	Brunswick, Maine July 2025 - Current
EDUCATION	University of California, Riverside Ph.D., Economics	Riverside, California June 2025
	Chung-Ang University M.A., Economics	Seoul, South Korea August 2018
	M.A. coursework, Linguistics	September 2015-June 2016
	B.A., Economics and English Language and Literature <i>magna cum laude</i>	January 2013
AWARDS AND HONORS	Distinguished Teaching Award (UC Riverside)	2025
	Dissertation Completion Fellowship Award (UC Riverside)	Spring 2025
	Outstanding Teaching Assistant Award (UC Riverside)	2021, 2025
	Dean's Distinguished Fellowship (UC Riverside)	2018-2019
WORKING PAPERS	When the Youngest Child Ages Out: Caretaker Eligibility and Parental Medicaid Loss [JMP] Using American Community Survey data from 2014 to 2019, I show that parents in non-expansion states lose Medicaid when their youngest child ages out of dependent-child status, even though their own income and circumstances are unchanged. Event-study and difference-in-differences estimates indicate that parental Medicaid falls by about 11 percentage points after the youngest child ages out. The coverage loss translates into uninsurance and is concentrated among the lowest-income families most exposed to the caretaker eligibility rule.	
	Coverage Continuity Under the ACA Dependent Coverage Provision [Working paper] Using monthly insurance coverage data from the Medical Expenditure Panel Survey, I find that the ACA's dependent-coverage provision improved coverage continuity for young adults entirely through parental employer-sponsored insurance by filling gaps in other coverage. When dependent-only months are excluded, the effect on full-year coverage essentially disappears. I am extending the analysis to the Survey of Income and Program Participation to study how the provision interacted with subsequent ACA coverage policies around the age-26 transition.	

	Coverage Expansion and Behavioral Health Treatment Supply: Evidence from the Affordable Care Act [Working paper] Using county-level data from 2004 to 2016, I examine how the ACA affected the supply of behavioral health treatment facilities. Difference-in-differences and event-study estimates show that facility supply increased more in counties with lower pre-ACA saturation, but primarily through growth in markets that already had providers rather than entry into previously unserved areas. The results show that coverage expansion can reshape the supply side while leaving geographic gaps in access intact.
	The Effect of Building Affordable Housing on Student Mobility [Working paper] Examines whether the Low-Income Housing Tax Credit program improves residential stability for families with school-age children using student data from North Carolina.
